In this project we use ReactJS to develop an online movie manager whose responsibility is to take care of all the activities a user can do on this portal.

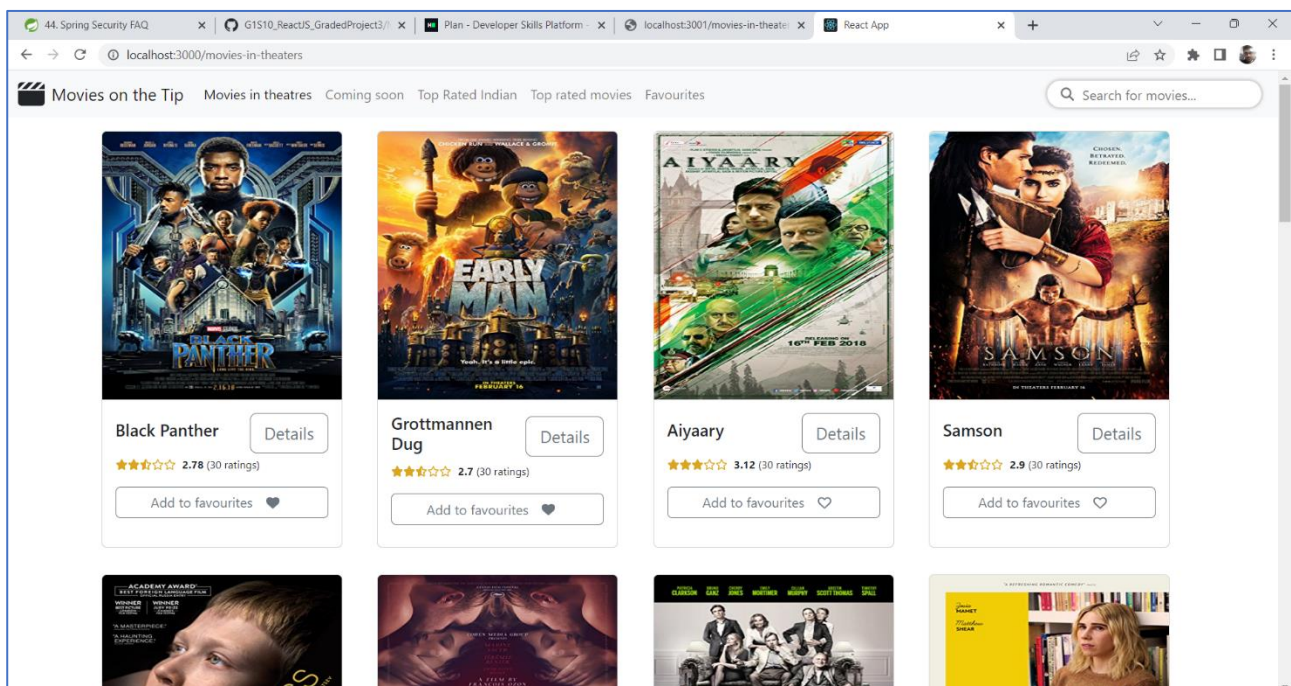

The application screens and displays movies along with their details.

We shall discuss further details and functionalities of this application.

## Main Page

The application loads by displaying movies under four categories viz.

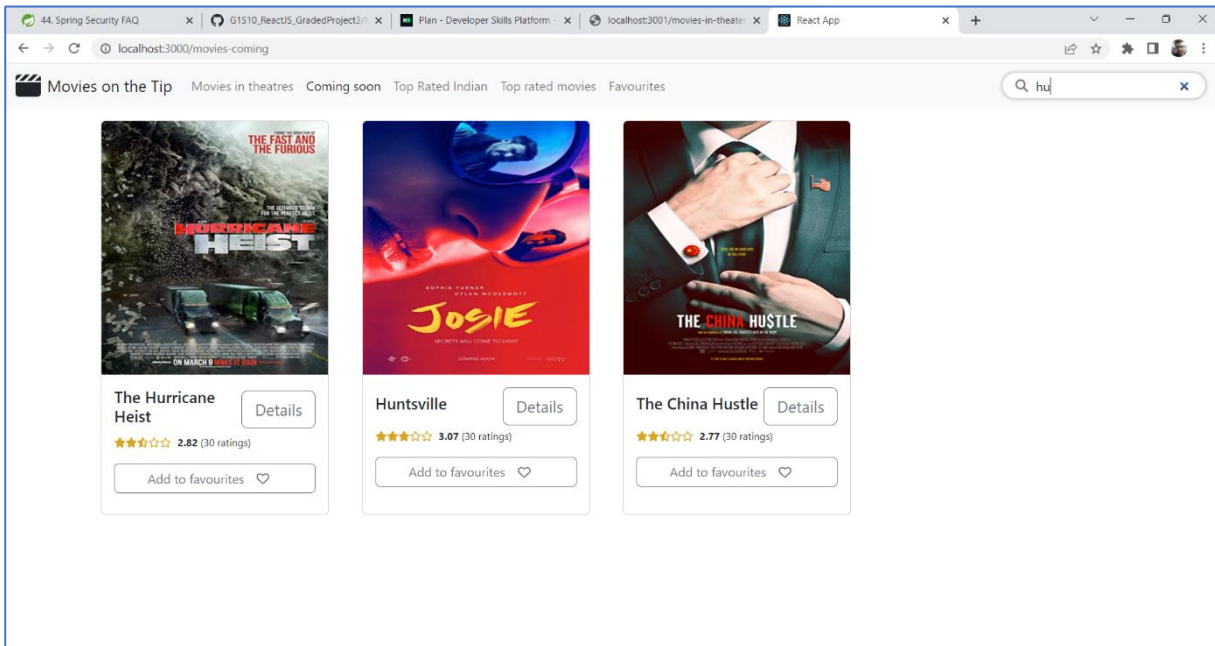

Coming soon  
Movies in theaters  
Top rated Indian  
Top Rated Movies

Application Loads

The Movie cards display all the movie's basic information (poster, title, ratings) in the selected options.

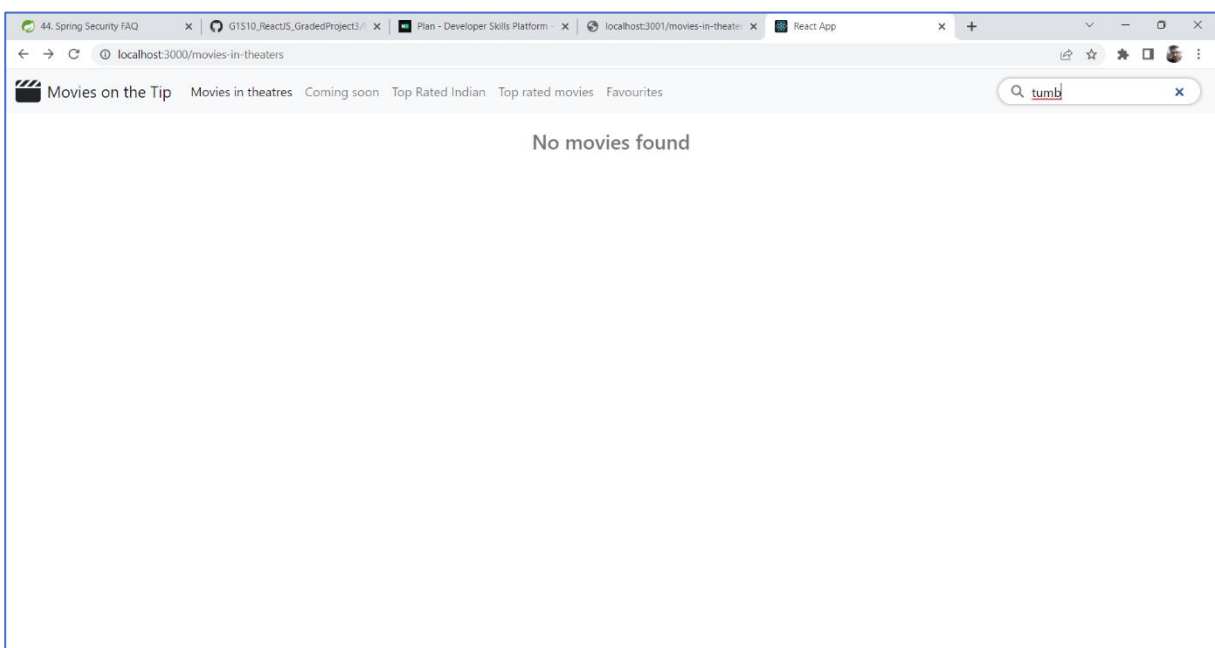

There are buttons to view movie details and add a particular movie to **Favourites**

### Search Movies

User can search for a specific movie under given category using search box provided in the navigation bar.

When a search doesn't yield any matches we see the message *"No movies found"*.

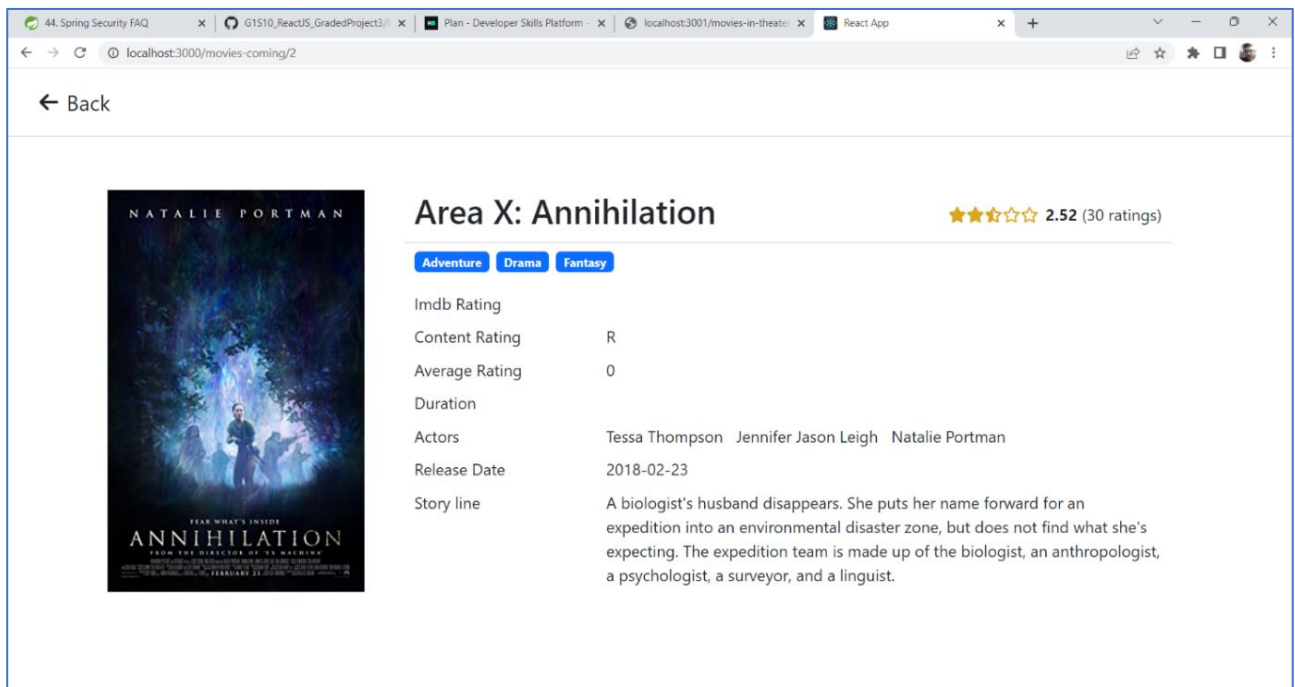

No movies found

Clicking on the **Details** button takes us to movies details page.

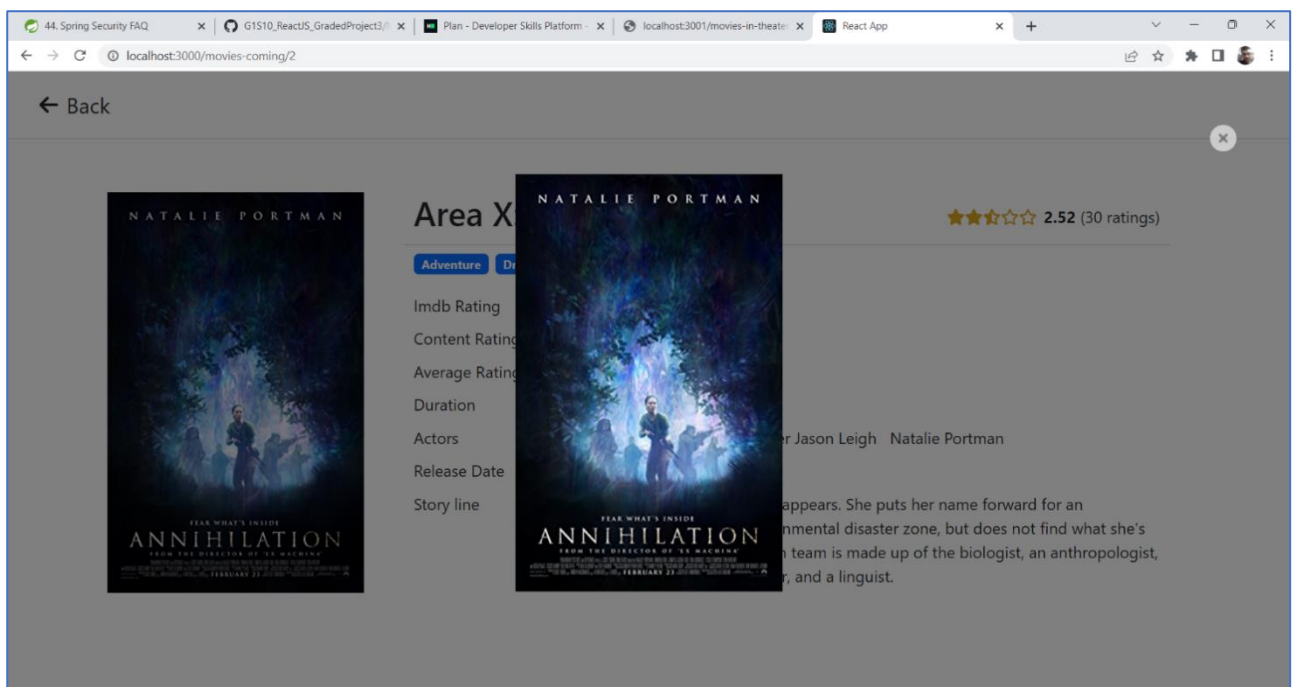

## Movie Details Page

This page gives extensive information about the selected movie along with its poster

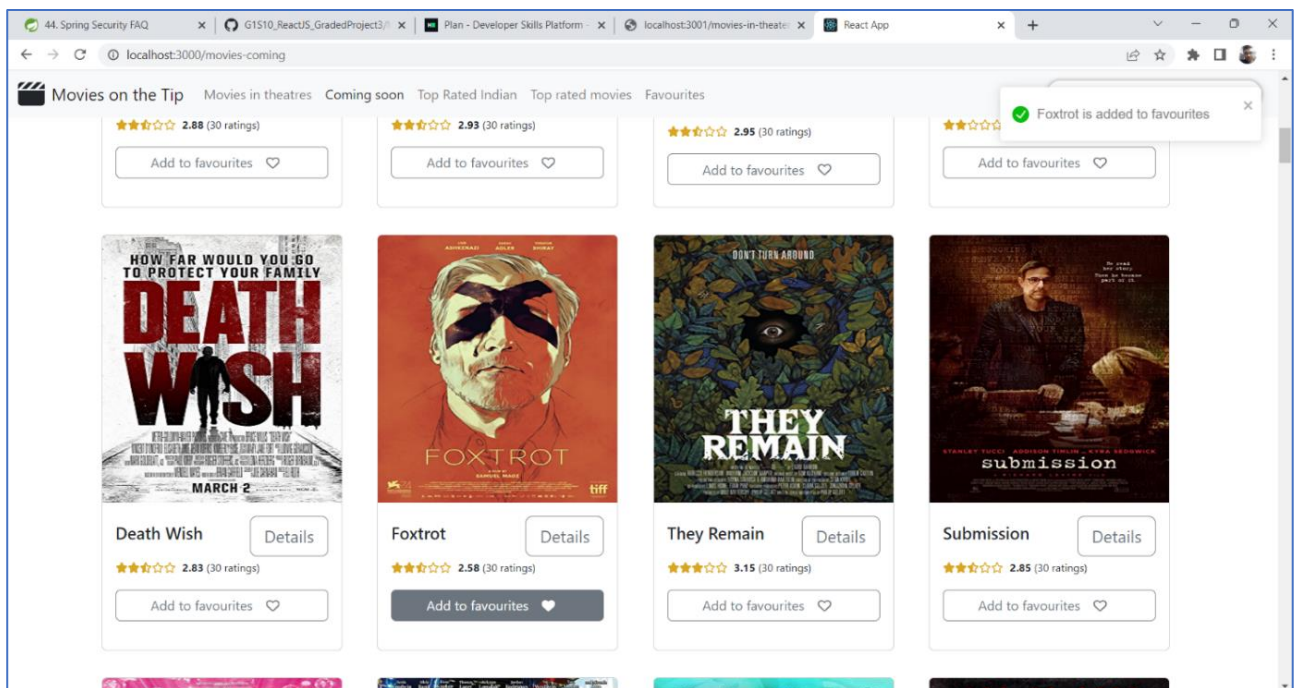

## Movies Details

The movie poster is enlarged when user clicks on it.

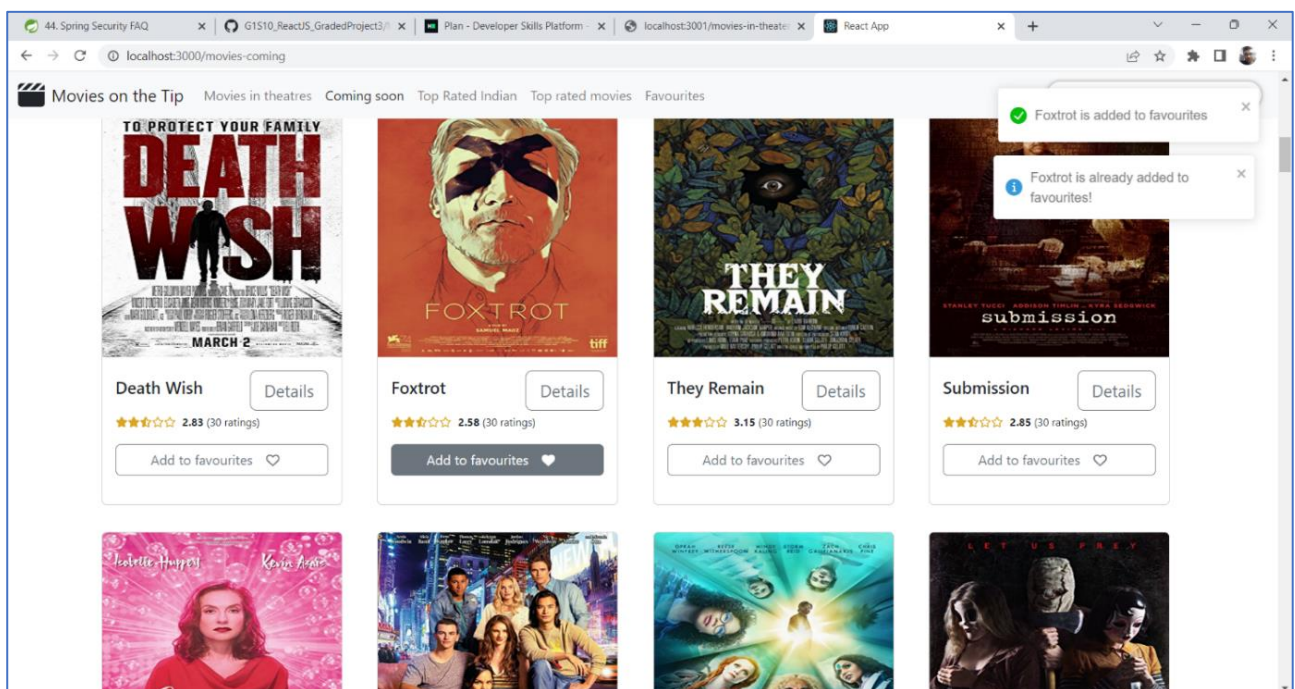

## Image Lightbox

User can add a movies to their **Favourites** list by clicking on the **Add to favourites** button.

Foxtrot added to Favourites

Application displays a message when a movie is already added to Favourites.

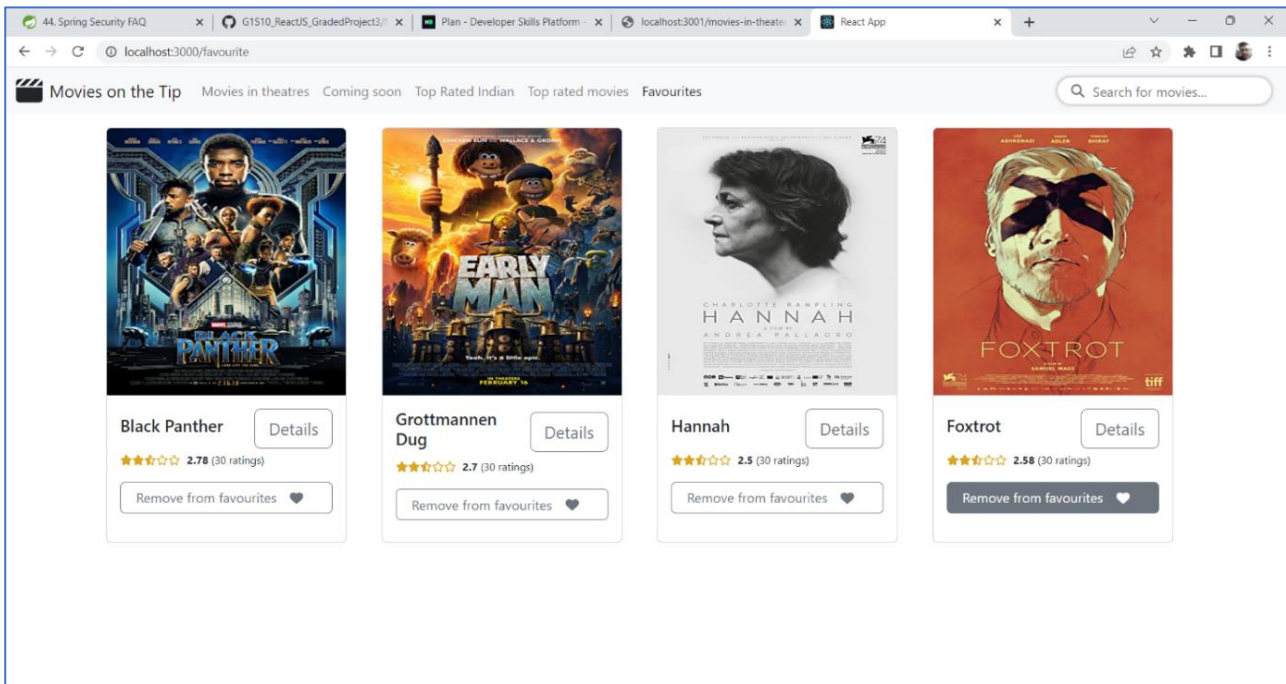

Foxtrot already added to Favourites

Now let's see if our favourite movies are added to the **Favourites** list...

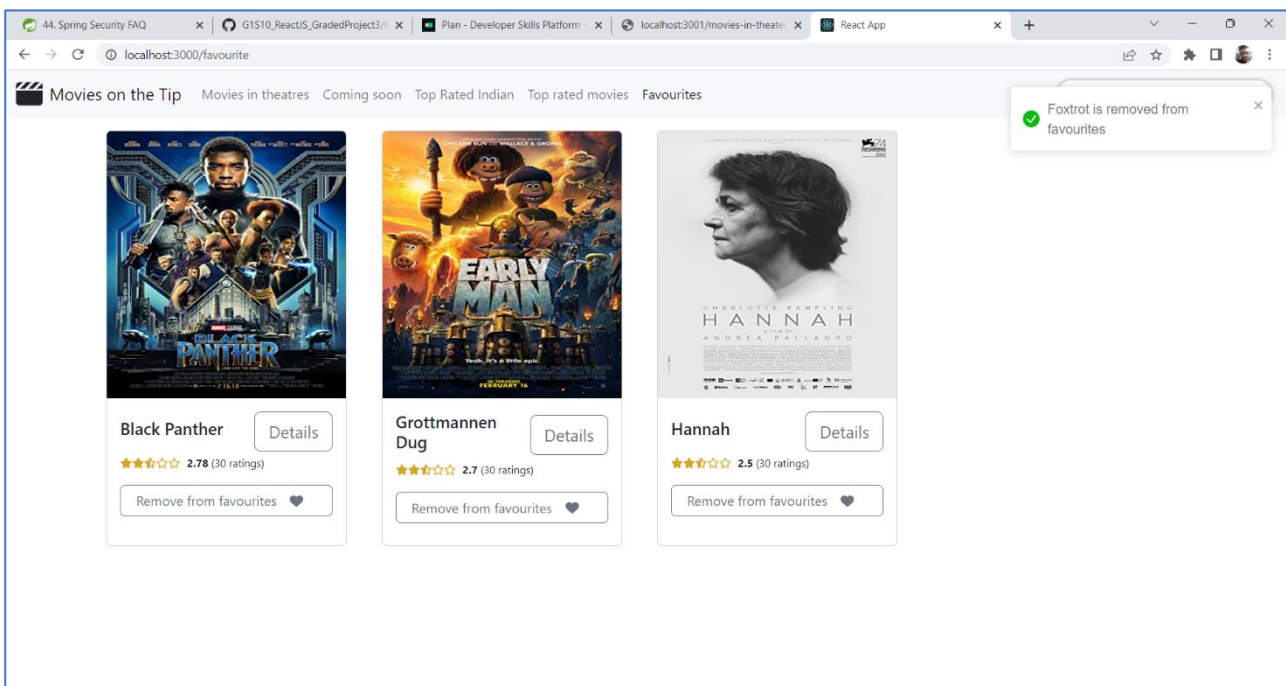

## Favourites Page

The **Favourites** page will list all the movies a user adds to this list.

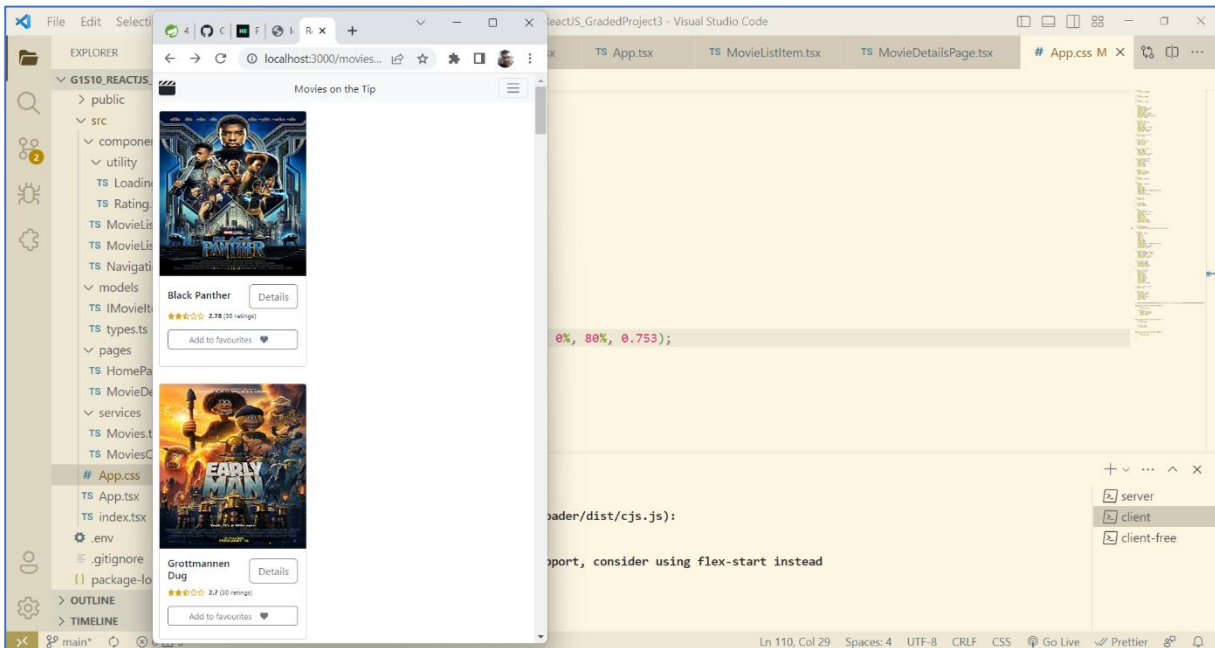

User can remove a movie from **Favourites** list by clicking on **Remove from Favourites** button.

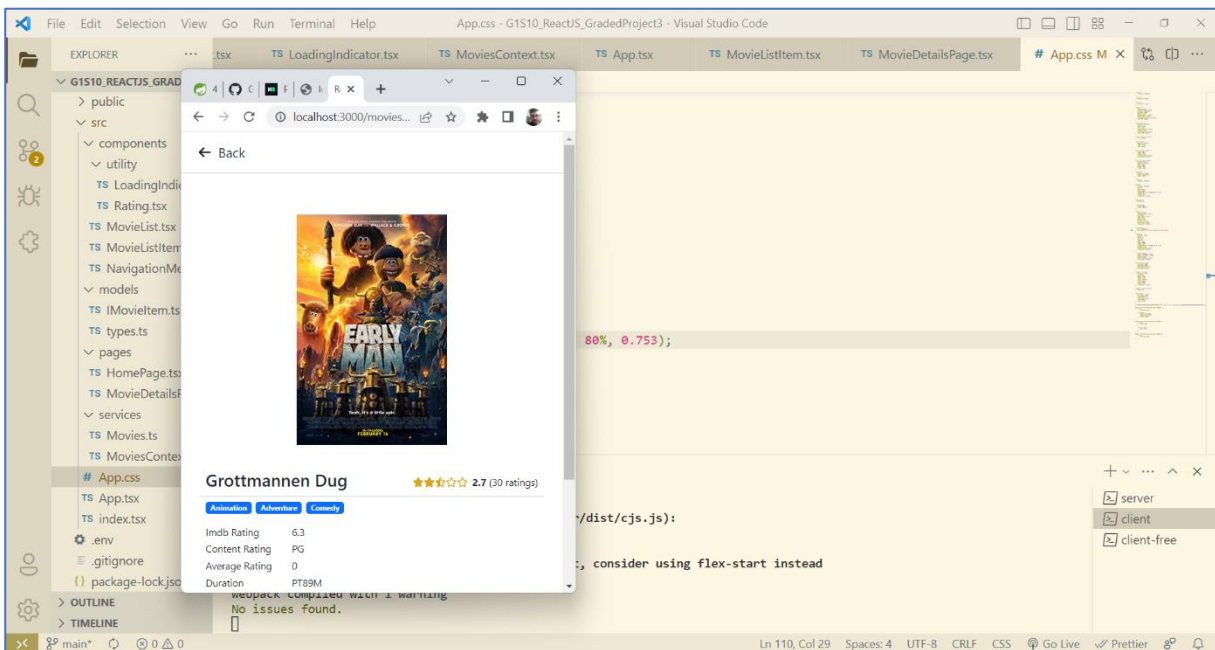

Foxtrot removed from favourites

# Responsive Design

The webpages have responsive design that adapt to every browser size.

Responsive movie list page

Responsive movie details page

Thus we have successfully created and demonstrated the functionalities of Online Movie Manager Application.
